## SUMMARY

Driven and highly accomplished **Computer Systems Engineer** seeking an immediate role where I can transition my strong academic background into practical solutions. I specialize in backend development, leveraging **C++** and **Python**, with deep applied knowledge in **Database Management** and Computer Networking. My experience includes developing specialized systems, such as a high-frequency **Crypto Sniper Bot** and advanced **AI/ML** diagnostic applications, demonstrating my commitment to delivering fast, functional, and data-efficient results.

## EDUCATION

**Computer Systems Engineering.** **March 2022 - December 2025**
Balochistan University Of Engineering And Technology Khuzdar.

- **Final Year Project:** Development of Crypto Sniper Bot for meme coin Trading.
- **CGPA: 3.91/4.0**

**Intermediate** **August 2019 – August 2021**
Government Boys Degree Collage Nushki

- **Grades 764 / 1100**

**Matriculation** **May 2017 – April 2019**
Government Boys Higher Secondary School Sharif Khan Nushki.

- **Grades: 755 / 1100**

## Applied Technical Experiences

**1. High-Frequency Crypto Sniper Bot Development (Final Year Project)**

- Engineered a low-latency algorithmic trading bot utilizing **Python** and **Web3** to monitor memecoin transactions and execute trades on the Ethereum network.
- Achieved performance goals of **sub-50 millisecond** trade execution speed by optimizing connection protocols and minimizing transactional overhead.
- Designed a secure, indexed data schema to log all trade history, market feeds, and performance metrics, leveraging efficient **Database Management** principles for fast retrieval and analysis.

- Managed the entire development lifecycle, demonstrating strong proficiency in backend architecture and performance tuning under high-concurrency conditions.

**2. AI-based Pneumonia Detection for Doctor's Assistance**

- Developed and trained a deep Convolutional Neural Network (CNN) model using **TensorFlow** and **PyTorch** to classify X-ray images for pneumonia diagnosis.
- Achieved a high validation accuracy of **97.2%**, significantly improving the efficiency of diagnostic support in a simulated clinical setting.
- Conducted rigorous data preprocessing and augmentation, using Python libraries (**NumPy/Pandas**), to ensure the integrity and volume of the input dataset.
- Integrated the final trained model into a functional API prototype to demonstrate real-time inference capability.

**3. Automatic Car Parking System Implementation (DLD Project)**

- Designed and implemented the full control logic for an automated parking garage system using hardware programming (DLD) and **C** for microcontrollers.
- Programmed the system to manage real-time sensor inputs, direct vehicle flow, and optimize space allocation autonomously.
- Successfully simulated and verified the core state machine, demonstrating reliable, error-free operation under various entry/exit load conditions.

## Leadership, Training and Services

**Scouting & Wilderness Training:**

- Dedicated participant in multiple advanced Scouting and camping expeditions (Quetta and Ziarat, 3 instances), culminating in a strong proficiency in emergency preparedness, navigation, and wilderness survival. This experience developed acute physical and mental resilience, demonstrating an ability to lead small teams.

**Community Service & Outreach:**

- Actively engaged in high-impact social initiatives, including participation in the national Prime Minister Green Youth Program and volunteering with a university organization supporting needy individuals. These roles fostered strong social responsibility, reinforced teamwork skills, and provided hands-on experience in executing and managing community-focused projects, resource allocation, and ethical leadership.

## Online Training, Certification and Internships

**Virtual AI/ML Internship** |Arch Technologies (Remote)

- Completed a specialized virtual internship focused on end-to-end Machine Learning model development, focusing on practical implementation and validation.
- Utilized Python, **TensorFlow**, and **scikit-learn** to build, train, and optimize predictive models for business applications.
- Gained hands-on experience in data preprocessing, feature engineering, and rigorous evaluation of model performance metrics.

**Python Development Internship** | Code Alpha (Remote)

- Executed core Python programming tasks focused on backend scripting and data manipulation for simulated projects.
- Gained practical experience in using Git for version control and collaborating on remote codebase structures.
- Applied programming fundamentals to solve logic problems and automate repetitive data handling tasks.

**Summer Internship Program |** Inter Services Public Relations (ISPR) *August 2025*

- Successfully completed a highly selective national internship program focused on strategic communication, national security, and public affairs.
- Participated in exclusive sessions with senior national figures, enhancing knowledge of governance, policy, and institutional frameworks.
- Developed advanced communication and critical thinking skills through exposure to complex national and media relations challenges.

**WordPress & Freelancing Course** | DGskills (Online) *July 2023 – October 2023*

- Successfully completed simultaneous certification in WordPress and Freelancing, focusing on digital marketing, client management, and effective online communication.
- Gained proficiency in core design principles, demonstrating creativity and the ability to produce visually appealing assets.

**Graphic Designing Course** | National Freelance Training Program (NFTP) *June 2022 – November 2022*

- Participated in a blended program (online theory and physical classes) to master industry-standard graphic design software and workflows.
- Applied design techniques to real-world projects, enhancing visual communication and attention to detail.

**Computer Basics Course** (6 Months) | (Social Welfare computer center Nushki) *August 2020 – January 2021*

- Completed a comprehensive 6-month course covering computer fundamentals, essential software packages (MS Office), and basic digital literacy.
